

Claims: 1 - 20 (canceled)

Claims: 30 - 71 (canceled)

Claims: 72 - 98 (canceled)

Claims: 99 - 138 (new)

Claims: Cancel all claims of record and substitute new claims 99 through 138 (new) as follows:

99. A supported frozen comestible comprising:

- (a) a frozen comestible comprising a body of an edible substance, and
- (b) a composite candy support comprising two discernable edible members in contact with each other suitable for supporting said frozen comestible, said two discernable edible members each being other than an edible coating, said composite candy support having a first portion extending into said frozen comestible, said first portion having sufficient surface area and means for adherence within said frozen comestible to support said comestible, said composite candy support having a second portion extending outside said frozen comestible, said second portion having sufficient surface area to provide a utilitarian support for said comestible.

100. The supported frozen comestible of claim 99 wherein

one of said two discernable edible members  
comprises candy.

101. The supported frozen comestible of claim 99 wherein  
the other of said two discernable edible members  
comprises candy.

102. The supported frozen comestible of claim 99 wherein  
the other of said two discernable edible members  
comprises comestible pieces, said comestible pieces  
are selected from a group consisting essentially of  
nuts, a non substantial amount of rice or grain,  
fruit including coconut, crushed candy, pieces of  
candy including mini size pieces of individually  
coated or non coated candies, and mixed comestible  
pieces.

103. The supported frozen comestible of claim 99 wherein  
the other of said two discernable edible members  
comprises a comestible substantially other than  
candy, said comestible substantially other than  
candy is selected from a group consisting  
essentially of peanut butter, mint, chewing gum,  
ice cream, gelatin, fruit, and dried fruit puree.

104. The supported frozen comestible of claim 99, further including a free standing base on said supported frozen comestible for providing a free standing supported frozen comestible.

105. The supported frozen comestible of claim 99 wherein said frozen comestible comprising a body of an edible substance comprises a selection from a group consisting essentially of a) a liquid type confection, including a selection from a group consisting essentially of ice cream, ice, ice milk, frozen juice, sorbet, frozen yogurt, pureed fruit, b) medicine, c) frozen pudding, d) frozen gelatin, e) a brownie, f) a cupcake, g) cereal with marshmallow, h) caramelized popcorn, i) a cookie, and j) multi flavored confections, said multi flavored confections include a selection from a group consisting essentially of 1) a cookie and creme mixture, 2) ice cream and candy pieces, 3) an ice cream and brownie chunk mixture, 4) ice cream, sherbert and shoestring licorice mixture, and 5) swirls of different colored and flavored comestibles.

106. The supported frozen comestible of claim 99,

further including a sufficient surface area on said second portion so that a person can hold said composite candy support and said frozen comestible with a hand, said sufficient surface area further includes supplying two handles to said person, one for each hand.

107. The supported frozen comestible of claim 99, further including a plurality of additional edible members in contact with said two discernable edible members on said composite candy support for construction of a composite candy support having a plurality of flavors and tastes.

108. The supported frozen comestible of claim 99, further including a lollipop placed on said composite candy support within said frozen comestible comprising a body of an edible substance, for a triple treat, said lollipop provides increased surface area for adherence of said supported frozen comestible to said composite candy support for consumption, said lollipop further includes a plurality of confections placed concentrically on said composite candy support.

109. The supported frozen comestible of claim 99, further including a plurality of cookies on the front and back of said supported frozen comestible comprising a body of an edible substance, for providing a sandwiched supported frozen comestible.

110. The supported frozen comestible of claim of 99, further including a void in said composite candy support, said void comprises means for providing additional adherence of said frozen comestible comprising a body of an edible substance to said composite candy support to avoid said frozen comestible prematurely falling off said composite candy support during consumption, said composite candy support further comprises a plurality of voids.

111. The supported frozen comestible of claim 99, further including means for decorating and depicting features and clothing on a whimsical supported frozen comestible, said means for decorating further includes decorating a whimsical frog like confection with a very long edible tongue, that extends beyond said whimsical supported frozen comestible.

112. The supported frozen comestible of claim 99, further including means for inhibiting the breakage of said composite candy support comprising a) means for manufacturing said composite candy support with ingredients that sustain more stress against breakage, b) means for providing ingredients running in a plurality of directions or a combination of directions for inhibiting the horizontal breaking of said composite candy support, c) using specific combinations and multiple layers of ingredients for making said support stronger, d) means for providing a plurality of different ingredients running concentrically, parallel, or maneuvered within said composite candy support, including twisted within said composite candy support, e) means for monitoring the amounts of moisture, shortening, sugar, air, air bubbles in said ingredients, f) means for providing a suitable size and shape for supporting said frozen comestible comprising a body of an edible substance, g) means for providing a mess guard for strengthening and preventing damage to said composite candy support, and h) means for providing protective packaging, shipping and handling for ensuring intact products.

113. The supported frozen comestible of claim 99, further including an edible moisture proof barrier coating on said composite candy support comprising a) means for preventing the transfer of moisture from said frozen comestible comprising a body of an edible substance to said composite candy support, b) means for providing a secure hold of said frozen comestible to said composite candy support for consumption of said supported frozen comestible, c) means for providing a prolonged shelf life for said supported frozen comestible, d) means for providing additional flavor and enjoyment on said composite candy support, said moisture proof barrier coating further includes texture for lending extra adherence of said frozen comestible comprising a body of an edible substance to said composite candy support, said texture further provides an easier grip for the fingers.

114. The supported frozen comestible of claim 99, further including a protective mess guard on said composite candy support, for providing a physical barrier for effectively keeping fingers from melting ingredients on said composite candy support and from getting messy, said protective mess guard

further comprises an edible mess guard.

115. The supported frozen comestible of claim 99, further including a protective drip guard on said supported frozen comestible for catching melting portions of said supported frozen comestible for preventing a mess on fingers and clothing, said protective drip guard further comprises an edible drip guard.

116. The supported frozen comestible of claim 99, further including a plurality of differing frozen comestibles supported on said composite candy support, said plurality of differing comestibles comprises a plurality of colors, shapes, sizes, flavors, and ingredients, said plurality of differing frozen comestibles further comprises an edible coating over each of said differing frozen comestibles for added separation, texture and flavor.

117. The supported frozen comestible of claim 99, further including a plurality of supports adhered in said frozen supported frozen comestible for providing a twin supported frozen comestible, said

twin supported frozen comestible comprises means for sharing.

118. The supported frozen comestible of claim 99 further including a three dimensional supported frozen comestible, said three dimensional supported frozen comestible further includes an animated figure.

119. A composite candy support suitable for use in supporting a subsequently frozen comestible comprising a body of an edible substance, comprising two discernable edible members in contact with each other, said two discernable edible members each being other than a candy coating, said composite candy support comprises a first portion for extending into said subsequently frozen comestible, said first portion having sufficient surface area and means for adherence within said subsequently frozen comestible to dependably support said frozen comestible, said composite candy support comprises a second portion for extending outside said subsequently frozen comestible, said second portion comprises sufficient surface area for providing a utilitarian support for said subsequently frozen comestible.

120. The composite candy support for use in supporting a

subsequently frozen comestible of claim 119 wherein one of said two discernable edible members comprises candy.

121. The composite candy support for use in supporting a subsequently frozen comestible of claim 119 wherein the other of said two discernable edible members comprises a selection from a group consisting essentially of a) candy, b) comestible pieces, said comestible pieces includes a selection from a group consisting essentially of candy pieces and crushed candy, nuts, fruit, a non substantial amount of rice or grain, c) mixed comestible pieces, and d) a comestible substantially other than candy, said comestible substantially other than candy includes a selection from a group consisting essentially of peanut butter, mint, chewing gum, ice cream, gelatin, fruit, and dried fruit puree.

122. The composite candy support for use in supporting a subsequently frozen comestible of claim 119, further including an edible moisture proof barrier coating on said composite candy support comprising a) means for preventing the transfer of moisture from said frozen comestible comprising a body of an edible

substance to said composite candy support, b) means for providing a secure hold of said frozen comestible to said composite candy support for consumption of said supported frozen comestible, c) means for providing a prolonged shelf life for said supported frozen comestible, d) means for providing additional flavor and enjoyment on said composite candy support, said moisture proof barrier coating further includes texture for lending extra adherence of said frozen comestible comprising a body of an edible substance to said composite candy support, said texture further provides an easier grip for the fingers.

123. The composite candy support for use in supporting a subsequently frozen comestible of claim 119, further including means for inhibiting the breakage of said composite candy support comprising, a) means for manufacturing said composite candy support with ingredients that sustain more stress against breakage, b) means for providing ingredients running in any direction or a combination of directions for inhibiting the horizontal breaking of said composite candy support, c) using specific combinations and multi layers of ingredients for making said support

stronger, d) means for providing a plurality of different ingredients running concentrically, parallel, or maneuvered within said composite candy support, including twisted within said composite candy support, e) means for monitoring the amounts of moisture, shortening, sugar, air, air bubbles in said ingredients, f) means for providing a mess guard for strengthening and preventing damage to said composite candy support, and g) means for providing protective packaging, shipping and handling for ensuring intact products.

124. The composite candy support for use in supporting a subsequently frozen comestible of claim 119, further including a free standing base on said composite candy support for providing a subsequently free standing supported frozen comestible.

125. A supported frozen comestible comprising:

- (a) a comestible comprising a body of an edible substance suitable for freezing,
- (b) a composite candy support comprising two edible members in contact with each other suitable for supporting said comestible comprising a body of an edible substance suitable for freezing, said two edible members each

being other than a candy coating, and

- (c) means for supporting said comestible comprising a body of an edible substance suitable for freezing.

126. The supported frozen comestible of claim 125 wherein one of said two edible members comprises candy.

127. The supported frozen comestible of claim 125 wherein the other of said two edible members comprises a selection from a group consisting essentially of a) candy, b) comestible pieces, said comestible pieces include a selection from a group consisting essentially of candy pieces, crushed candy, nuts, fruit, a non substantial amount of rice or grain, c) mixed comestible pieces, and d) a confection substantially other than candy, said confection substantially other than candy includes a selection from a group consisting essentially of peanut butter, mint, chewing gum, ice cream, gelatin, fruit, and dried fruit puree.

128. The supported frozen comestible of claim 125, further including a free standing base for providing a free standing supported frozen

comestible.

129. The supported frozen comestible of claim 125, further including an edible moisture proof barrier coating on said composite candy support comprising

- a) means for preventing the transfer of moisture from said frozen comestible comprising a body of an edible substance to said composite candy support,
- b) means for providing a secure hold of said frozen comestible to said composite candy support for consumption of said supported frozen comestible, c)
- means for providing a prolonged shelf life for said supported frozen comestible, d) means for providing additional flavor and enjoyment on said composite candy support, said moisture proof barrier coating further includes texture for lending extra adherence of said frozen comestible comprising a body of an edible substance to said composite candy support, said texture further provides an easier grip for the fingers.

130. A method of providing a supported frozen comestible comprising:

- (a) providing a comestible comprising a body of an edible substance suitable for freezing,

- (b) providing a composite candy support comprising two edible members in contact with each other suitable for supporting said comestible comprising a body of an edible substance, said two edible members each being other than a candy coating, said composite candy support having first and second portions for supporting said comestible,
- (c) inserting said first portion of said composite candy support into said comestible comprising a body of an edible substance, said first portion comprising sufficient surface area and means for adherence within said comestible to support said comestible,
- (d) freezing said comestible and said composite candy support, and
- (e) leaving said second portion, having sufficient surface area outside of said comestible to provide a utilitarian support for said comestible, whereby a consumer may enjoy a safer, longer lasting composite candy supported frozen confection.

131. The method of providing a supported frozen comestible of claim 130, further including a sufficient surface area on said second portion so that a person can hold said composite candy support and said frozen comestible with a hand, said

sufficient surface area further includes supplying two handles to said person, one for each hand.

132. The method of providing a supported frozen comestible of claim 130 wherein one of said two edible members in contact with each other suitable for supporting said comestible comprising a body of an edible substance comprises candy.

133. The method of providing a supported frozen comestible of claim 130 wherein the other of said two edible members in contact with each other suitable for supporting said comestible comprising a body of an edible substance comprises a selection from a group consisting essentially of a) candy, b) comestible pieces, said comestible pieces includes a selection from a group consisting essentially of nuts, fruit, including coconut, candy pieces, crushed candy, a non substantial amount of rice or grain, c) combined comestible pieces, and d) a comestible substantially other than candy, said comestible substantially other than candy comprises a selection from a group consisting essentially of peanut butter, mint, chewing gum, ice cream, gelatin, and dried fruit puree.

134. The method of providing a supported frozen comestible of claim 130, further including a free standing base for providing a free standing supported frozen comestible.

135. The method of providing a supported frozen comestible of claim 130, further including a lollipop placed on said composite candy support within said frozen supported comestible for a triple treat, said lollipop provides increased surface area for adherence of said supported frozen comestible to said composite candy support for consumption, said lollipop further includes a plurality of confections placed concentrically on said composite candy support.

136. The method of providing a supported frozen comestible of claim 130, further including an edible moisture proof barrier coating on said composite candy support comprising a) means for preventing the transfer of moisture from said frozen comestible comprising a body of an edible substance to said composite candy support, b) means for providing a secure hold of said frozen comestible to said composite candy support for

consumption of said supported frozen comestible, c) means for providing a prolonged shelf life for said supported frozen comestible, d) means for providing additional flavor and enjoyment on said composite candy support, said moisture proof barrier coating further includes texture for lending extra adherence of said frozen comestible comprising a body of an edible substance to said composite candy support, said texture further provides an easier grip for the fingers.

137. The method of providing a supported frozen comestible of claim 130, further including a free standing base for providing a free standing supported frozen comestible.

138. The method of providing a supported frozen comestible of claim 130, further including a moveable sleeve of a predetermined shape surrounding the sides of said comestible comprising a body of an edible substance, for exposing said comestible for consumption, and for providing a push pop supported comestible, said moveable sleeve of a predetermined shape further comprises an edible sleeve.
